Open to Engineering Leadership | AI/ML Platforms | Full-stack Development | SaaS Architecture | LLM Integrations

PROFESSIONAL SUMMARY

Engineering leader with 12+ years building and modernizing production SaaS platforms in Ruby on Rails and Python (Django, FastAPI), including 6+ years leading engineering teams. Specializes in making legacy systems easier to change and run: consolidated multiple codebases into one platform (80% lower maintenance costs), broke up monoliths, and put CI/CD and monitoring in place that doubled release velocity and cut incident response time by 40%. Has shipped AI/ML to production for 5+ years, from a PyTorch recommendation engine at Emami Frankross and TensorFlow predictive models at Inmar to, most recently, LLM resume parsing and hybrid semantic search for an AI recruitment platform and a multi-agent content pipeline at Magrofy. Deploys on AWS, Docker, Kubernetes, and GitHub Actions, and works with Claude and Codex as daily coding assistants, holding their output to the same code review and CI checks as any other change.

TECHNICAL SKILLS

Languages: Ruby, Python, TypeScript, JavaScript, SQL, Golang

Backend & APIs: Ruby on Rails, Django, FastAPI, REST APIs, GraphQL, Microservices, Multi-tenant SaaS, SQLAlchemy, Alembic, Sidekiq, Celery, Rails Engines

Frontend: React, Next.js, Hotwire, Tailwind CSS, Payload CMS

AI & ML: LLM integration, RAG, AI agents, PyTorch, TensorFlow, Generative AI, LangGraph, LangChain, OpenAI API, Anthropic Claude API, Ollama, Prompt engineering, Structured outputs, Multi-agent pipelines, Embeddings, Vector search, Hybrid search, Semantic search, Recommendation systems, Predictive analytics

Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, CI/CD, Jenkins, Nginx, Caddy, Capistrano, Zero-downtime deployments

Data & Search: PostgreSQL, pgvector, MySQL, Redis, Elasticsearch, Algolia, Row-level security, Query optimization

Testing & Quality: RSpec, Vitest, pytest, Automated testing, Code review

Security & Auth: RBAC, JWT, Refresh tokens, TOTP 2FA, Rate limiting, Encryption, Audit logging

Observability: New Relic, Grafana, Kibana, CloudWatch, APM, Alerting

AI coding tools: Claude Code, Codex, MCP, Gemini, Jules, Antigravity, Cursor, Windsurf, GitHub Copilot

Leadership & Delivery: Engineering leadership, System design, Software architecture, Technical roadmap, Agile / Scrum, Sprint planning, Estimation, Mentoring, Cross-functional collaboration

LEADERSHIP HIGHLIGHTS

- **Technical direction:** Sets architecture for whole products and makes the hard calls: what to build, what to buy, and what to simplify.
- **Ownership:** Owns delivery end to end, from planning and estimation to releases, production, and the quality bar every change has to clear.
- **Agile delivery:** Runs sprint planning, estimation, and roadmap alignment, keeping engineering priorities tied to what the business needs.
- **Mentoring:** Grows engineers through code review and pair programming.
- **Cross-functional coordination:** Coordinates work across cross-functional teams and multiple enterprise clients.
- **AI-driven engineering:** Runs Claude, Codex, Gemini, Jules, and Antigravity like a parallel engineering team: each agent works its own branch, and nothing merges without review and the same CI gates as human code. That is how one engineer took Arccaa's ATS from first commit to v1.0 in four months, backed by 1,600+ automated tests.

PROFESSIONAL EXPERIENCE

Engineering Head

Arccaa Analysis & IT Solutions | Oct 2025 - Present

Independent, part-time. Built and run engineering for Arccaa's recruitment platform and the AI service behind it, plus the company website. Owns the architecture, the code, the releases, and the VPS they run on. Uses Claude and Codex through MCP as coding assistants; their changes go through the same RSpec, Vitest, lint, and security checks in CI as anyone's.

- **Arccaa Prime - recruitment platform (ATS):** A multi-tenant ATS on Rails 8 and React 19, built from the first commit: jobs, hiring pipelines with a Kanban board, interviews synced to Google and Outlook calendars, a candidate portal, and a public jobs board. Each company's data is walled off with Postgres row-level security. Resumes come in by upload, bulk upload, or email and are parsed into structured profiles in the background. Recruiter search blends BM25 keyword ranking with pgvector similarity using reciprocal rank fusion, falls back to keywords if the embedding model is down, and supports full Boolean queries. Every candidate gets a match score from weighted skill coverage and semantic similarity, and recruiters see the breakdown and the missing skills. 1,600+ automated tests.
- **ARCCAA AI Engine:** Moved the LLM work out of Rails into its own FastAPI service. It parses PDF and Word resumes into structured profiles in a single model call, drafts job descriptions and must-have skills from a title and a few inputs, and writes candidate fit summaries and interview questions from the match data Rails sends. Each task can run on a local Ollama model or any OpenAI-compatible API through config; production uses a hosted model for generation and keeps embeddings on a local 768-dim model so every vector in pgvector stays comparable. Model output is cleaned of code fences, repaired by fallback parsers when the JSON is broken, and if that still fails a rule-based parser returns a usable result instead of an error.
- **AAITS website & CMS:** Replaced the company's WordPress site with Next.js 16 and Payload CMS 3 on Postgres, self-hosted with Docker and Caddy. Wrote a re-runnable import that brought it all into Payload with categories, navigation, SEO fields, and a redirect for every old URL, so no existing link broke. Editors build pages from reusable blocks with drafts, previews, forms, and search; admins sign in with 2FA.

Technologies: Ruby on Rails 8, React 19, TypeScript, Python, FastAPI, PostgreSQL, pgvector, Sidekiq, Redis, Ollama, OpenAI API, Next.js 16, Payload CMS, RSpec, Vitest, Docker, Caddy

IT Consultant

Magrofy | Apr 2026 - Present

Independent, part-time engagement. Two products built end to end, schema through UI.

- **AronFX VFX Tracker:** Built from scratch - an operations and billing platform for VFX production spanning clients, projects, bids, shots, work tracking, vendors, invoices, payments, and multi-currency project metrics, modelled around real VFX work such as roto, paint, camera and object tracking, and compositing. Designed a permission-key authorization model enforced in the backend and mirrored in the UI to drive page, column, and field visibility, alongside JWT refresh tokens, RBAC, TOTP, login-activity tracking, rate limiting, encryption, and audit logging; added invoice PDF generation and Excel import for legacy workbooks.
- **Magrofy Social Engine:** SiteCast is a multi-brand agentic content platform for the Magrofy website network. A run moves through Scout, Strategist, Writer, Illustrator, Guardian, Repurposer and Publisher stages with structured JSON outputs, risk tiering, and human approval gates at every exit - an operator picks a site, the model drafts the article and a hero image, a person approves it, and SiteCast publishes to that site's own API and promotes it from that site's own X account. Every website is a Publishing Channel - endpoint, auth type, encrypted credential and a JSON payload template - so adding a site is configuration, not code. Seven are wired up today. Nothing ships unattended: credentials are verified before every publish, scheduled runs are idempotent, and a global kill switch blocks all publishing.

Technologies: Python, FastAPI, Django, SQLAlchemy, PostgreSQL, Celery, Redis, Next.js, Tailwind, JWT / RBAC, Anthropic Claude

Lead Architect

Aequor Information Technologies / Virtusa | Nov 2024 - Apr 2025

Led development on Storable Edge, an all-in-one self-storage operations platform. Drove sprint planning, effort estimation, and roadmap alignment; performed code reviews, pair programming, and mentoring. Contributed to microservice integrations, API design, and performance tuning; used Claude MCP for agentic development and improved deployments with Docker, GitHub Actions, and Jenkins.

Technologies: FastAPI, Rails 7, Python, Ruby 3.2, GraphQL, Sidekiq, AWS, Docker, Grafana

Senior Architect

Emami Frankross | Apr 2023 - May 2024

Led backend modernization of a large-scale e-commerce monolith powering thousands of daily transactions. Built a DevOps stack (AWS + Docker + GitHub Actions), raised release velocity 2x, and cut incident response >40% with Grafana + New Relic. Designed a PyTorch + FastAPI recommendation engine on user/product embeddings, integrated with the Rails platform, and improved search relevance with Algolia.

Technologies: Rails 6.1, Python, PyTorch, FastAPI, Kubernetes, Algolia, New Relic

Senior Software Engineer

Inmar Intelligence - Collective Bias | Feb 2022 - Sep 2022

Designed predictive-analytics models with Python and TensorFlow to estimate influencer engagement, reach, and campaign ROI. Built budget-optimization algorithms on historical + costing data, contributed to architecture and sprint planning, and streamlined microservice deployment with existing Kubernetes pods and Docker images.

Technologies: Django, TensorFlow, Python, Kubernetes, GraphQL, React, Tailwind, PostgreSQL, Redis, Celery

Associate Consultant

Global Logic | May 2021 - Feb 2022

Designed architecture for new enterprise HR features used by high-volume global clients. Led sprint planning across cross-functional teams and improved CI/CD via Jenkins + AWS, reducing deployment failures. Supported multi-client delivery for Workday, SuccessFactors, Marriott, and J&J.

Technologies: Django, React, Tailwind, MySQL, Redis, AWS, Kubernetes, Jenkins, Celery

Senior RoR Developer / Associate Tech Lead

SunRay Construction Solutions | Oct 2019 - Apr 2021

Designed architecture for critical new features, optimized queries, and improved search with Elasticsearch & Kibana. Raised overall performance >10% and built a complete DevOps pipeline (Docker + GitHub Actions + AWS) enabling zero-downtime deployments.

Technologies: Rails 5.0, React, Elasticsearch, Kibana, AWS, MySQL

Project Lead / Application Architect

Denken Solutions - Auto Refund Claims | May 2018 - Sep 2019

Architected and developed the platform end-to-end - design, DB schema, APIs, auth, workflows. Built CI/CD with Jenkins on AWS, introduced Docker-based environments, and implemented CloudWatch-driven alerting to improve uptime.

Technologies: Rails 5.2, PostgreSQL, Redis, Elasticsearch, AWS, Docker, Jenkins

Software Engineer

LotVue India (LotVue LLC, USA) | Jun 2017 - Apr 2018

Restructured the SaaS multi-tenant architecture, cutting maintenance costs 80% by consolidating multiple codebases into a unified Rails Engines platform. Built CI/CD with Jenkins + Docker and integrated New Relic APM for production monitoring.

Technologies: Rails 5.0, MySQL, Rails Engines, AngularJS, AWS, New Relic

Software Engineer

Emami Frankross (earlier tenure) | Apr 2016 - May 2017

Built and maintained the backend for a high-traffic e-commerce application; optimized the product catalog and API performance for Android/iOS mobile apps.

Technologies: Rails 4.0, Ruby 2.0, AWS, Redis, Sidekiq, PostgreSQL

Ruby on Rails Developer

Carveniche Technologies | Jun 2015 - Mar 2016

Installed and configured BigBlueButton for live audio/video, screen share, and virtual classrooms; upgraded legacy Rails apps from 3.2 to 5.2 and integrated conferencing APIs.

Technologies: Rails 3.2->5.2, BigBlueButton, MySQL, Capistrano, AWS

Software Engineer

Kreatio Software Pvt. Ltd | Mar 2014 - Jun 2015

Worked on Ruby on Rails applications - feature development, debugging, and enhancing CMS-based products.

Technologies: Ruby on Rails, CMS

PROJECTS

- **AI résumé assistant (sujitpranavreddy.dev):** A chat assistant on my portfolio that answers recruiters' questions using RAG: the résumé and blog posts are chunked by role, project, and skill, embedded into pgvector, and the five closest chunks ground Claude's answer. Career-order questions also get the full timeline, and if retrieval fails it falls back to the whole résumé.

Technologies: Python, FastAPI, PostgreSQL, pgvector, Voyage AI embeddings, Anthropic Claude, Next.js

EDUCATION

B.Tech, Jawaharlal Nehru Technological University, Hyderabad (2008-2012).

LANGUAGES

English, Telugu, Hindi, Kannada, Tamil

PERSONAL DETAILS

Date of Birth: 6th February 1991

Hobbies: Scuba Diving, Long Drives, Travel, Cricket, Badminton

Marital Status: Married
